Interior Design

BY LEELA MOUNIKA

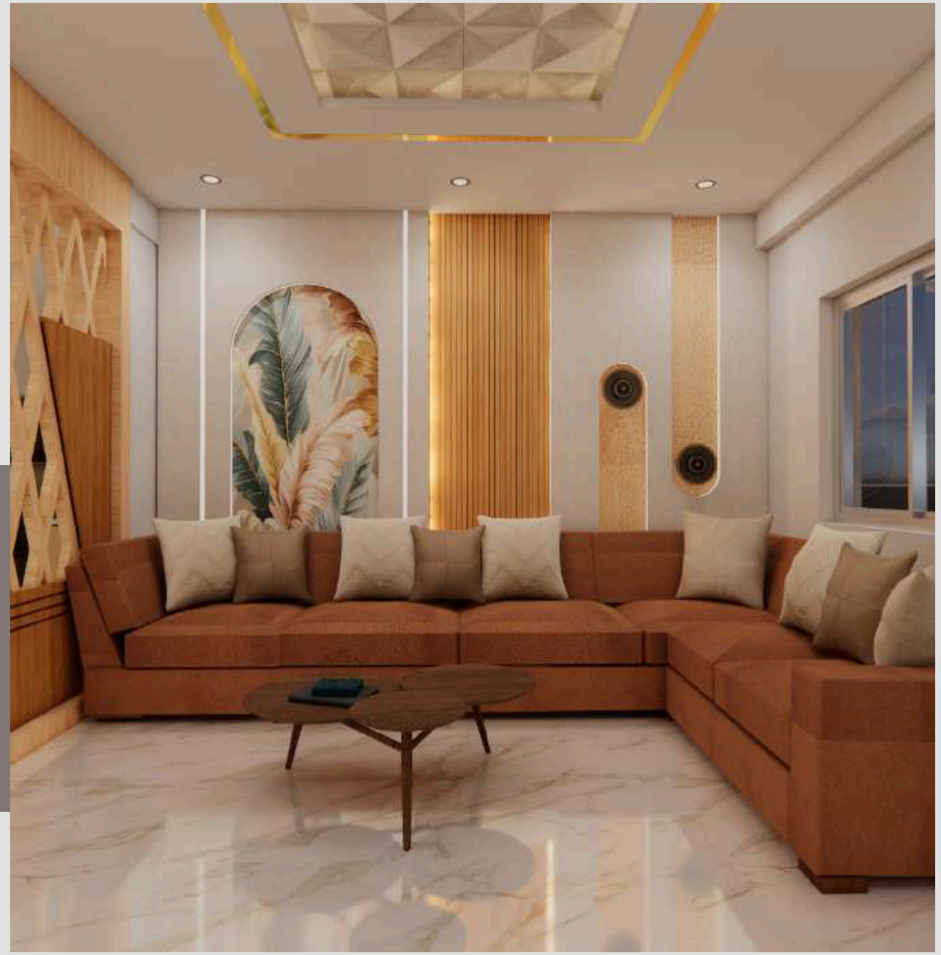
Portfolio presentation

About Me

Hello, my name is Leela Mounika Indupurala. I have completed my B.Tech in Civil Engineering from Pragati Engineering College, and I have over 2 years of experience working as an Interior Designer at RADIEK Company.

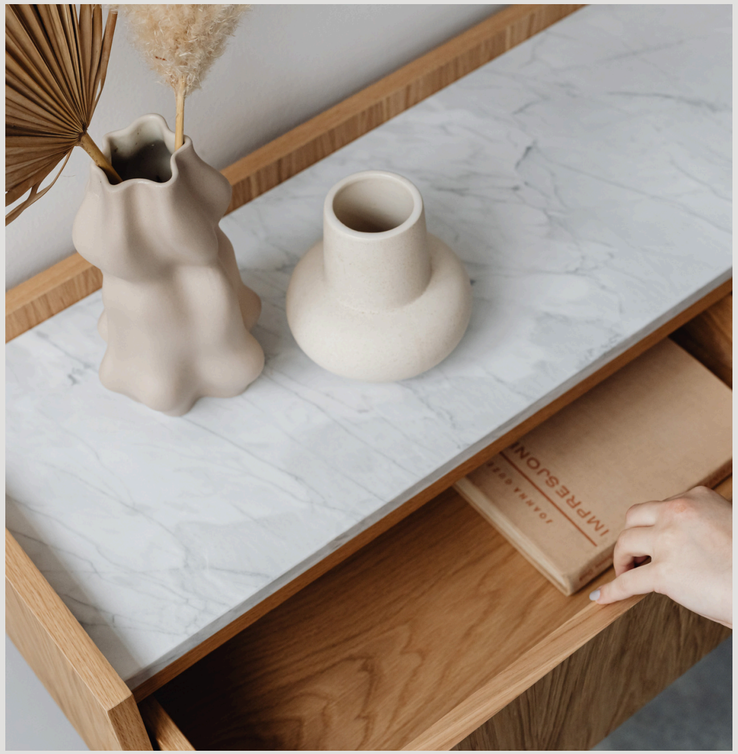
I have experience in 2D drafting, interior elevations, 3D modelling, rendering, space planning, and preparing quotations and cost estimates. I am familiar with software such as AutoCAD, SketchUp, V-Ray, Enscape, and Adobe Photoshop.

My goal is to create functional, aesthetically pleasing, and well-planned interior spaces that meet clients' requirements. My Civil Engineering background also helps me understand technical drawings and practical design requirements.



I am a creative, detail-oriented, and enthusiastic person who is always willing to learn new skills and improve my design knowledge. I look forward to contributing my skills and experience to a growing organization.

Design Philosophy



My design philosophy is to create interiors that balance functionality,aesthetics,and comfort. I believe every space should be thoughtfully planned to maximize space utilization while reflecting the client's lifestyle, preferences, and needs.

I focus on smart space planning, attention to detail, material selection, and well-coordinated colors and lighting to create visually appealing and practical interiors. By combining creative design ideas with technical accuracy, I aim to transform spaces into comfortable, elegant, and functional environments that add value to everyday living.

Design Process

Client Consultation

Space Planning

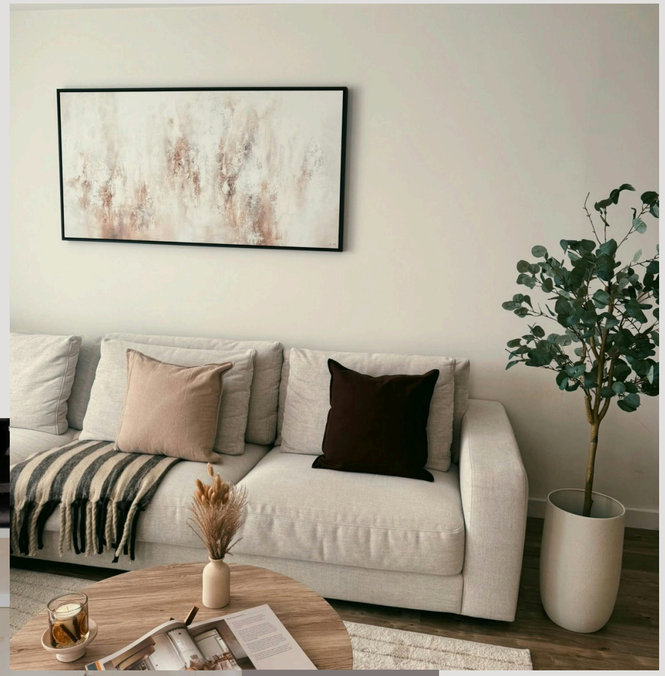
2D Drafting & Elevations

3D Modelling & Visualization

Materials & Finishes

Quotations & Cost Estimation

Design Finalization



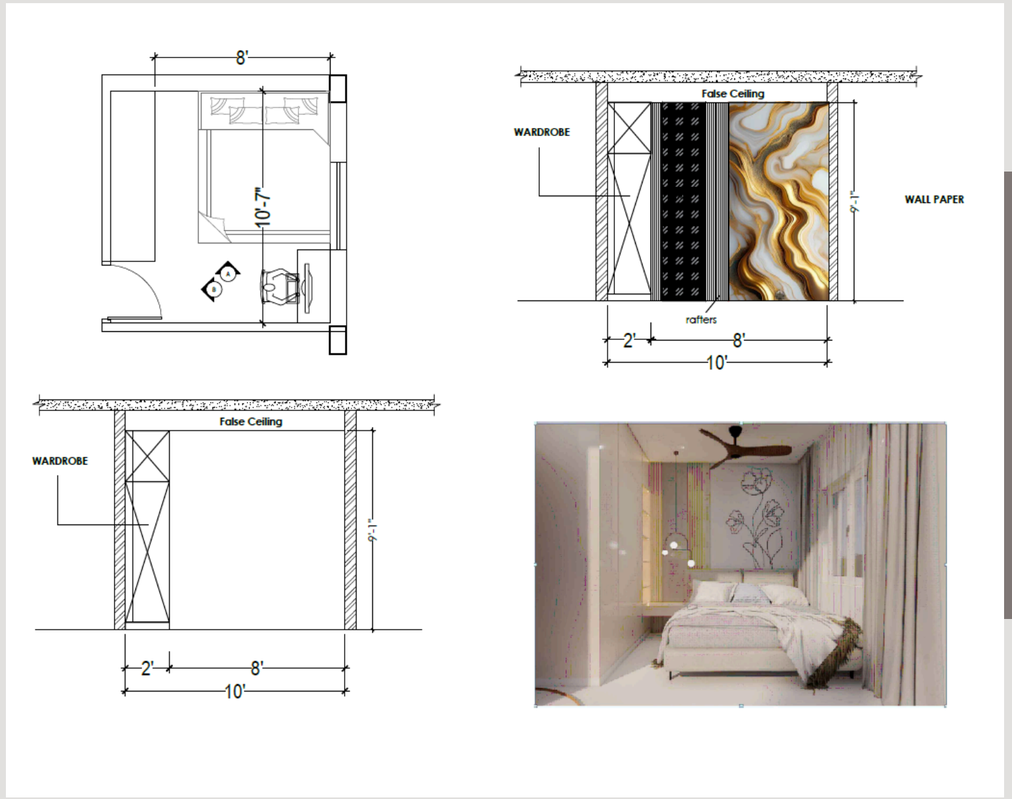
Client Consultation

The design process begins with understanding the client's vision, lifestyle, preferences, and functional requirements. I focus on clear communication to identify their expectations, budget, and project goals. This initial stage helps establish a strong foundation for developing personalized interior design solutions that balance aesthetics, functionality, and comfort while aligning with the client's needs.

Space Planning

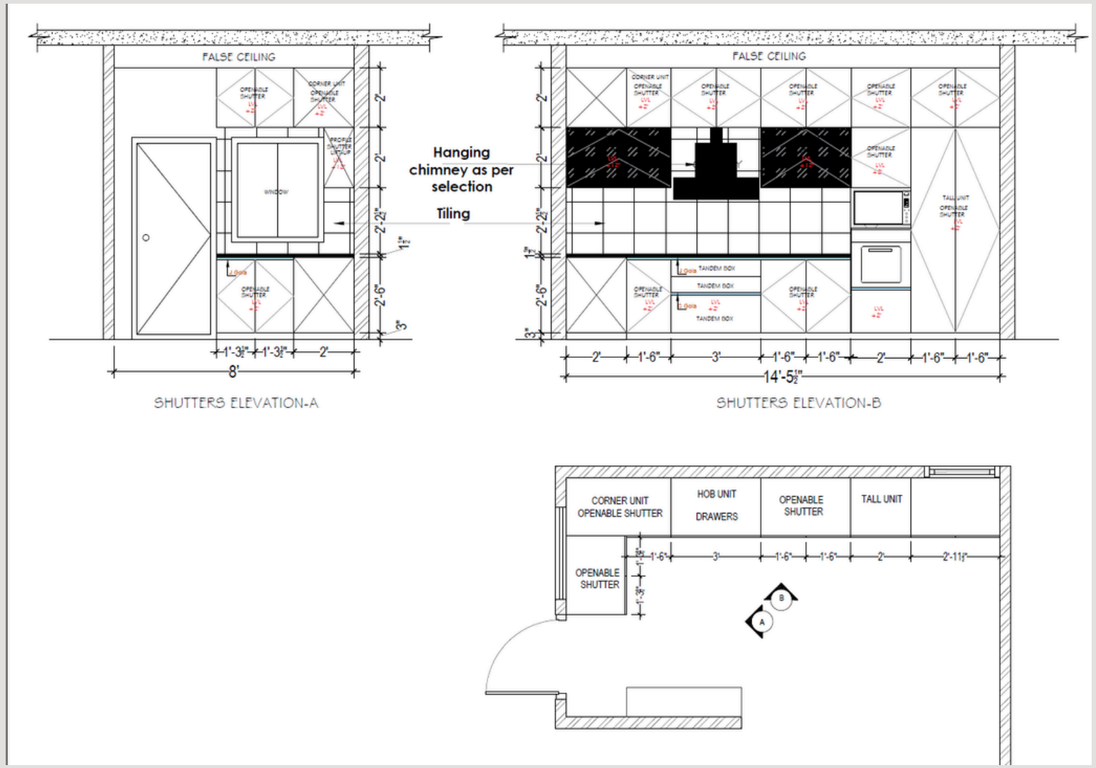
Effective space planning is the foundation of a functional and well-organized interior. I focus on optimizing available space through thoughtful furniture placement, efficient circulation, and practical layout development. By considering room dimensions, storage requirements, natural lighting, and the client's lifestyle, I create balanced layouts that maximize usability, comfort, and visual appeal while maintaining harmony throughout the space.

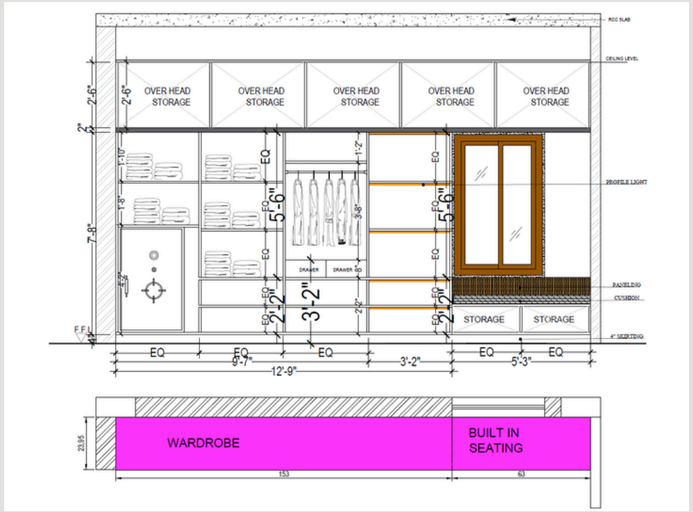
2D Drafting & Elevations

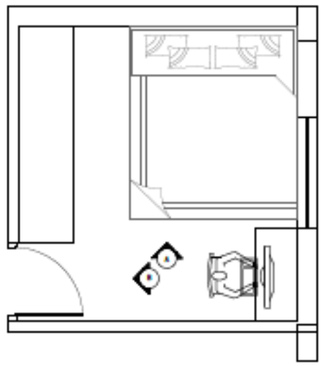


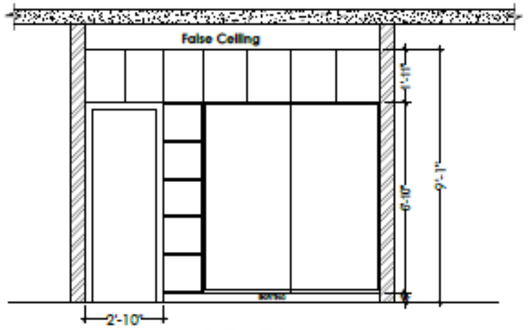
I prepare detailed 2D floor plans and interior elevations that translate design concepts into clear, accurate, and practical drawings. My work includes kitchen layouts, modular cabinet elevations, wardrobe designs, bedroom elevations, and custom storage details. I focus on dimensional accuracy, furniture placement, cabinet arrangements, and technical detailing to ensure that every design meets project requirements and supports smooth execution.

Using AutoCAD, I develop well-organized technical drawings that balance functionality, space efficiency, and design intent.









ELEVATION-A

Wardrobe & Storage Drawings

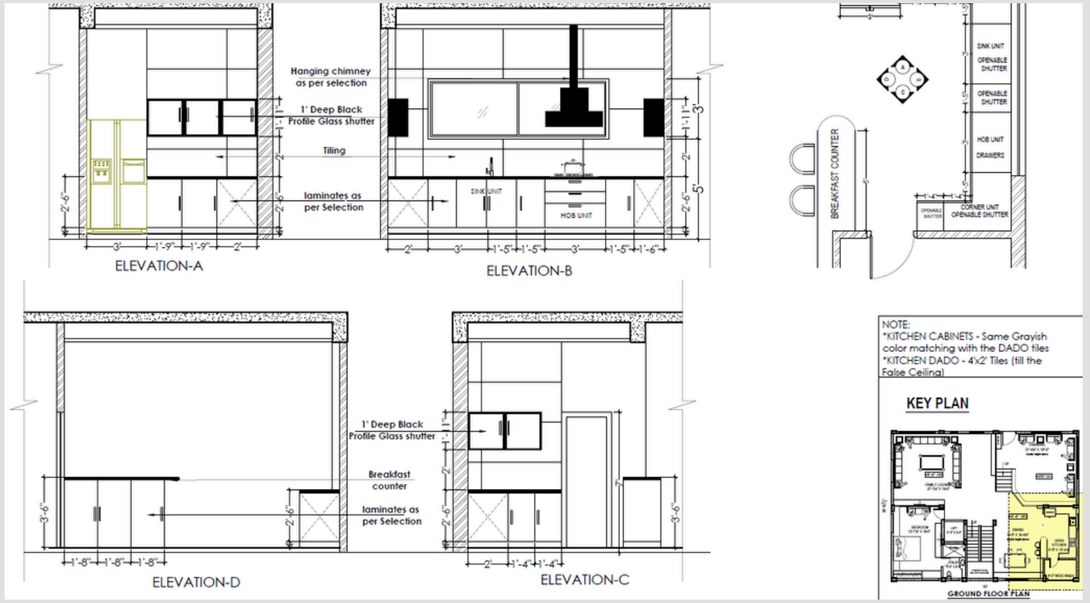
I create wardrobe plans and elevations with practical internal storage arrangements, including shelves, drawers, hanging sections, and other customized storage components. The designs are planned to maximize available space while maintaining accessibility, functionality, and visual consistency.

Bedroom & Furniture Elevations

I develop bedroom elevations and furniture details, including bed back panels, headboard designs, bedside units, study desks, and integrated storage solutions. These drawings help define furniture proportions, placement, finishes, and the overall visual composition of the room.

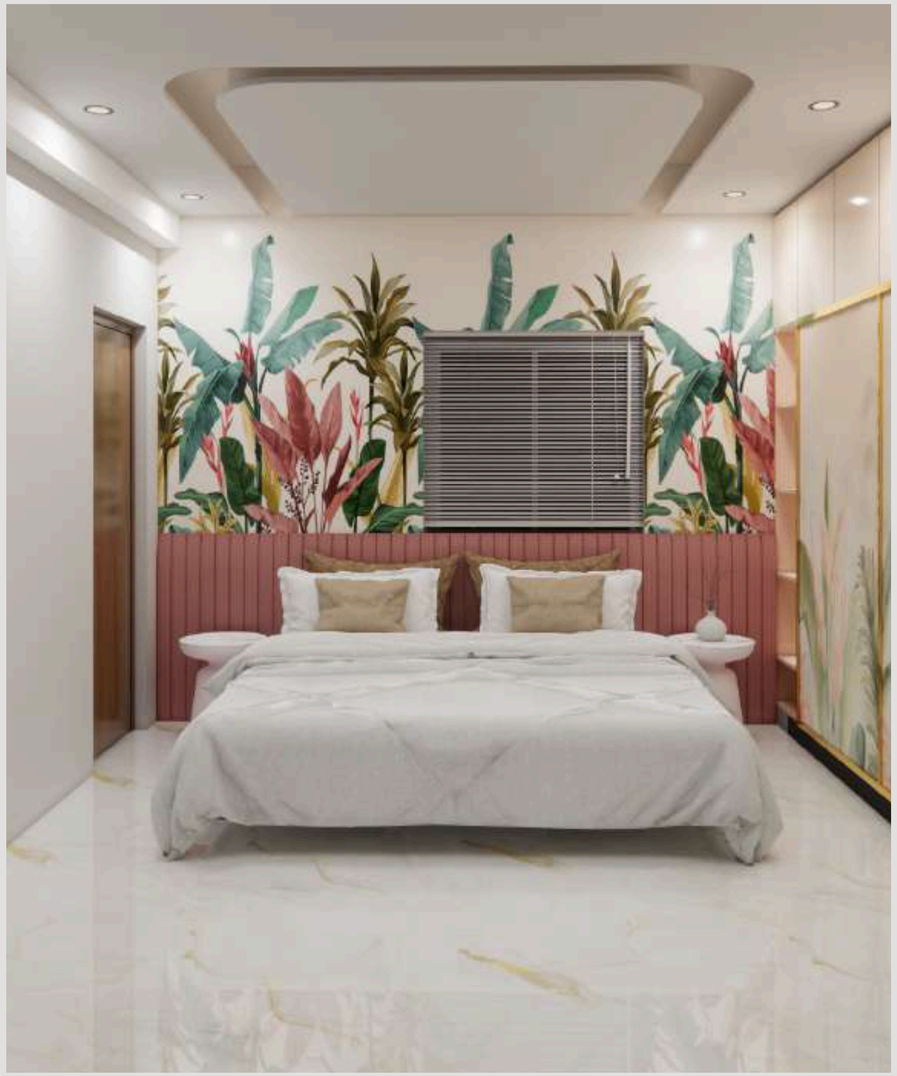
Kitchen Layouts & Elevations

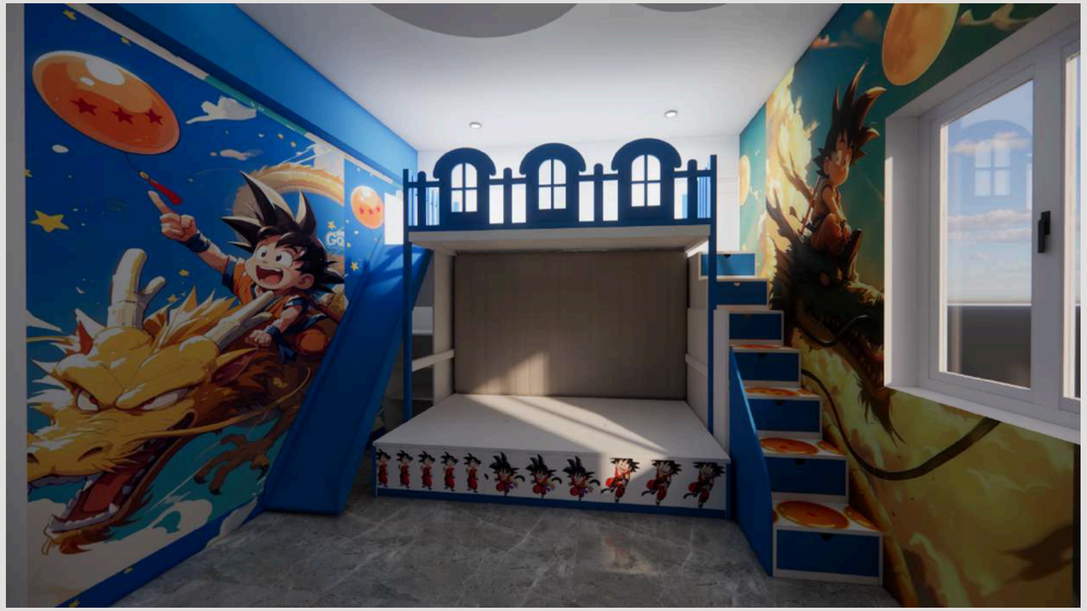
I prepare modular kitchen plans and detailed elevations, focusing on cabinet arrangements, overhead and base units, storage requirements, countertop layouts, and appliance placement. I also develop multiple elevation views to clearly communicate the kitchen design, dimensions, and cabinet configurations.

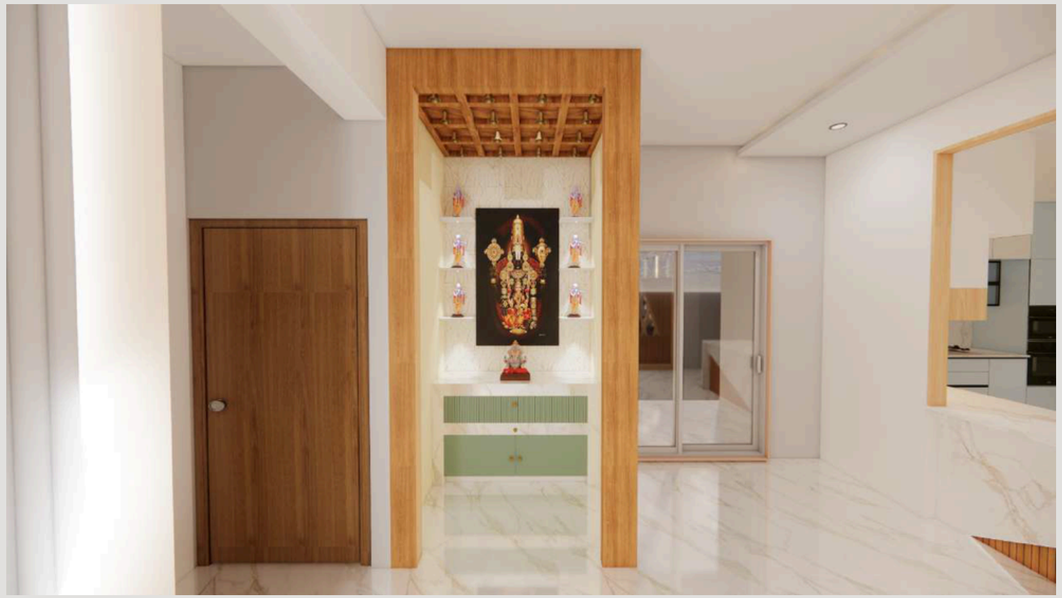


3D Modelling & Visualization

I create detailed 3D interior models and realistic renderings to transform design concepts into visually appealing spaces. My work includes living rooms, modular kitchens, bedrooms, wardrobes, TV units, and customized furniture. I focus on material selection, textures, lighting, and color coordination to achieve a balance between aesthetics and functionality.







Materials & Finishes

I focus on selecting suitable materials, finishes, colors, and textures to create cohesive and visually appealing interiors. My approach combines aesthetics, durability, functionality, and budget considerations to meet project requirements.

I incorporate appropriate finishes for furniture, wardrobes, modular kitchens, wall panels, countertops, and other interior elements to achieve a balanced and elegant design.

Quotations & Cost Estimation

QUOTATIONS

I prepare detailed interior design quotations based on client requirements, selected materials, design specifications, and project scope. I organize item-wise costs for modular furniture, finishes, hardware, and other interior components to provide clients with a clear understanding of the proposed project expenses.

COST ESTIMATION

I estimate project costs by considering dimensions, material quantities, unit rates, labor charges, hardware, and finishing requirements. I focus on accurate calculations, budget planning, and efficient material utilization to develop practical and cost-effective interior solutions while meeting project requirements.

Get in touch

I am always excited to explore new opportunities, collaborate on creative projects, and contribute to innovative interior design solutions. If you are looking for a passionate interior designer who values creativity, functionality, and attention to detail, I would love to connect with you.
